PART I: BACKGROUND PHYSICS

1: The Speed of Light 3

1.1: Light is pretty fast 5
 1.2: Lightspeed varies 6
 1.3: Lightspeed is not just the speed of light 7
 1.4: Lightspeed affects inertia 8
 1.5: Lightspeed controls timelag 8
 1.6: Lightspeed is locally constant 8
 1.7: Lightspeed is now defined as constant 9
 1.8: The gravity well 9
 1.9: Light travels in straight lines. Except when it doesn't 11
 1.10: Light used to define a straight line 12

2: Gravity, Energy and Mass 13

2.1: What is mass? 15
 2.2: Does light have mass? 16
 2.3: Genie in a bottle: Thought-experiments with bottled light 17
 2.4: Difficulty of detecting the effect 19
 2.5: Mass-to-energy conversion 20
 2.6: History of $E=mc^2$ 21
 2.7: Energy has mass, period 22

3: Curved Space and Time 23

3.1: Gravity is ... what, exactly? 25
 3.2: Gravity bends light 25
 3.3: Gravity warps geometry 26
 3.4: Gravity as a variation in inertia 28
 3.5: Energy-change in light due to gravity 29
 3.6: Gravitational redshifts and blueshifts 29
 3.7: Gravitational time dilation 30
 3.8: Not just curved space, but curved spacetime 32

4: Relativity 33

4.1: Relativity of space 35
 4.2: Relativity of time 35
 4.3: Relativity of velocity 36
 4.4: Isaac Newton's "Principia" 37
 4.5: Mach and relativity 38
 4.6: Practical advantages of "relativistic" arguments 39
 4.7: Applying Occam's Razor 40
 4.8: Different "Principles of Relativity" 40
 4.9: Causes of confusion 41
 4.10: Relativity of acceleration 42
 4.11: Relative acceleration vs. absolute acceleration 43
 4.12: Relativity of rotation 45
 4.13: "Centrifugal" and "Coriolis" fields 45
 4.14: Rotational dragging 47
 4.15: Experimental verification 49
 4.16: Equivalence principles 50

5: The Newtonian Catastrophe 51

5.1: Newton's unification scheme 53
 5.2: The lightspeed mistake ... 54
 5.3: The "space-density" mistake 54
 5.4: The light-energy mistake 55
 5.5: Loss of wave-particle duality 55
 5.6: Newton vs. Huyghens 56
 5.7: The lightspeed trap 57
 5.8: Consequences for physics 59

PART II: EFFECTS DUE TO RELATIVE MOTION

6: Doppler Shifts 63

6.1: "Stationary observer" Doppler effect 65
 6.2: "Stationary source" Doppler effect 66
 6.3: Comparisons 66
 6.4: Transverse Doppler effects (audio) 67
 6.5: Optical Doppler effects 69
 6.6: Longitudinal Doppler effect under Special Relativity 69
 6.7: Transverse Doppler effect under Special Relativity 70

7: Apparent Length-Changes in Moving Objects 71

7.1: Apparent changes in length 73
 7.2: Approaching objects appear elongated 73
 7.3: Receding objects appear contracted 73
 7.4: Degree of contraction or elongation 74
 7.5: Special relativity and length-changes 75
 7.6: Rulers and gravitation 76

8: Aberration of Angles 77

8.1: Aberration of Angles 79
 8.2: Relativistic aberration at 90 degrees 80
 8.3: The Relativistic Ellipse 81
 8.4: Putting it all together 83
 8.5: Relativistic ellipse: Newtonian theory 83
 8.6: Relativistic ellipse: Special relativity 84

9: Moving bodies drag light 85

9.1: Generality of dragging effects 87
 9.2: Naming conventions: Gravitomagnetism, frame-dragging 87
 9.3: Argument #1: Linear GM as a gravitational timelag effect 87
 9.4: Argument #2: "Effective gravitational potential" depends on relative velocity 88
 9.5: Argument #3: Gravitational smudging 89
 9.6: Argument #4: The slingshot effect 89
 9.7: Argument #5: Rotational GM and gravitational timelag 90
 9.8: Argument #6: QM and "probabilistic" smudging 91
 9.9: Argument #7: Experiment: The Fizeau effect 91
 9.10: Inconsistencies in our approach to velocity 92
 9.11: Cancellation and unification? 94
 9.12: Implementation – the tilted gravity-well 95
 9.13: Zero revisited: the "impossibility" of motion 96
 9.14: Worldlines and curvature 97
 9.15: Uh-oh ... 98
 9.16: The score chart 99
 9.17: "Relativistic" implementations of lightspeed constancy 100

PART III: LIMITS TO OBSERVATION

10: Quantum Mechanics and Observability 103

10.1: The origin of quantum mechanics 105
 10.2: Is quantum mechanics a theory? 106
 10.3: The "Copenhagen" and "Hidden Variable" interpretations 107
 10.4: The two-slit experiment 108
 10.5: Quantum mechanics and everyday experience 111
 10.6: Illusion and reality 112
 10.7: Pair Production 114
 10.8: Virtual particles 114
 10.9: Pseudo- pair production 115

11: Dark Stars and Black Holes 117

11.1: John Michell's dark stars 119
 11.2: Properties of a compact gravitational object 120
 11.3: Escape velocity calculations and the gravitational horizon 121
 11.4: Tidal forces 121
 11.5: "Visiting" particles around a dark star 122
 11.6: Dark stars and "acoustic" metrics 123
 11.7: Acoustic metrics and nonlinearity 124
 11.8: Black holes under GR1915 125
 11.9: The Kerr black hole 129
 11.10: The expansion problem 130
 11.11: The acceleration problem 130
 11.12: Black holes according to Quantum Mechanics 131
 11.13: Hawking radiation 132
 11.14: Pair-production and pseudo-pair-production 133
 11.15: Attempts to eliminate the "dark star" explanation 134
 11.16: Acoustic metrics, once again 135
 11.17: "Acceleration radiation" 136
 11.18: The Black Hole Information Paradox 137
 11.19: The BHIP and Microcausality 138
 11.20: "Obserververspace" arguments 139
 11.21: The Membrane Paradigm 140
 11.22: Holographic arguments 141
 11.23: The Holographic Principle in action 142
 11.24: The "no-signal" problem 143
 11.25: The verdict 144

PART IV: UPDATING STANDARD THEORY

12: What's wrong with General Relativity? 147

12.1: "Core" experimental tests of general relativity 149
 12.2: Experimental significance 152
 12.3: Incompatibility with quantum mechanics 153
 12.4: Fudge factor?: The Cosmological Constant 154
 12.5: Possible breaking of conservation laws 155
 12.6: Possible incompatibility with Mach's principle 155
 12.7: Fudge factor?: Galactic curves and Dark Matter 156
 12.8: Arbitrary suspension of the Equivalence Principle 157
 12.9: Invoking reduction to flat spacetime 159
 12.10: Use of tailor-made definitions 160
 12.11: Do cosmological horizons count as "acoustic"? 163

12.12: Doppler effects and the Black Hole Information Paradox 164

12.13: Grand unification? 165
 12.14: Gravitomagnetic incompatibility? 167
 12.15: Complexity 168
 12.16: Is GR1915 scientifically falsifiable? 169
 12.17: Blaming special relativity 170

13: Horrible Nasty Mathematics 171

13.1: A family of relativistic theories 173
 13.2: Selecting a reference theory 174
 13.3: Defining the range 174
 13.4: Ellipses 175
 13.5: Special relativity as a special solution 175
 13.6: Positive values of Θ and positive curvature 176
 13.7: Rejecting negative solutions for Θ 176
 13.8: Gravitomagnetism suggests positive Θ 177
 13.9: Graphed Doppler responses 177
 13.10: Setting "one" as a higher limit for Θ 178
 13.11: Using the BHIP to set a minimum of "one" for Θ 178
 13.12: Oops? 179
 13.13: Preliminary conclusions 180

PART V: FLAT SPACETIME AND SPECIAL RELATIVITY

14: Einstein's "special" theory of relativity 183

14.1: The birth of special relativity 185
 14.2: Failure of earlier theories ... 185
 14.3: ... "Draggable" aethers 185
 14.4: ... Absolute aether 186
 14.5: Aether, either, neither, neither 187
 14.6: Lorentz Ether Theory (LET), c. 1904 188
 14.7: Special relativity, 1905 189
 14.8: Additional interpretational overhead 190
 14.9: Minkowski Spacetime 192
 14.10: Implications of Minkowski spacetime 194

15: So, what's wrong with the special theory? 195

15.1: SR and Obserververspace 197
 15.2: Is the special theory "robust"? 198
 15.3: Minkowski spacetime as an argument against SR 199
 15.4: The "stratification" problem 200
 15.5: Does SR "do" acceleration? 201
 15.6: Extensibility 203
 15.7: Cumulative redshift effects ... 203
 15.8: ... Thermal redshifts 205
 15.9: ... Cosmological redshifts 206
 15.10: Round-trip effects in general 208

16: Experimental Evidence for Special Relativity 209

16.1: Commonly-cited evidence for special relativity 211
 16.2: ... $E=mc^2$ 211
 16.3: "Classical Theory" vs. Special Relativity 212
 16.4: ... "Transverse" redshifts 213
 16.5: ... "Longitudinal" Doppler shifts 214
 16.6: ... The lightspeed upper limit in particle accelerators 215
 16.7: The "searchlight" effect 216
 16.8: Velocity-addition 216
 16.9: Particle tracklengths 216
 16.10: Muon showers 217
 16.11: ... Particle storage rings & centrifugal time dilation 218
 16.12: deSitter / Brecher disproof of simple emission theory 219
 16.13: "Domain of applicability" issues 220
 16.14: Conclusions 222

PART VI: FUTURE PHYSICS

17: Cosmologies 225

17.1: The expanding universe 227
 17.2: The "Big Bang" 227
 17.3: Spatial closure 228
 17.4: Expansion curves 231
 17.5: Cosmological time coordinates 232
 17.6: The Hartle-Hawking "bubble universe" 234
 17.7: Entropy, arrows of time, and the Big Crunch 235
 17.8: Extending the "bubble" model 236
 17.9: Variable dimensionality? 237
 17.10: "Mirror" and "kaleidoscope" universes 237
 17.11: Oranges and raspberries 239
 17.12: A few Multiverses 240
 17.13: Fractal universe arguments 243
 17.14: Why is the universe rational? 246
 17.15: The Drake Equation 248
 17.16: Before Event Zero 249

18: Trouble with Wormholes 251

18.1: What is a wormhole? 253
 18.2: "Spacetime surgery" and simple optics 253

18.3: Wormhole instability? 254

18.4: The distance problem 256
 18.5: The ageing problem 256
 18.6: The "antihorizon" problem 256
 18.7: "Anti-wormholes" and spatial reversal 257
 18.8: The Kerr wormhole 260
 18.9: The fieldline problem 261
 18.10: The gravity problem 261
 18.11: Wormhole politics 262
 18.12: The time-connection problem 262
 18.13: Wormhole time travel? 263
 18.14: Mistaken time machine behaviour 264
 18.15: Quantum foam 265
 18.16: Scale-dependent topology 266
 18.17: Pseudowormholes 266
 18.18: Does quantum foam contain *only* pseudowormholes? 268
 18.19: Do wormholes exist at all? 268

19: Metric Engineering and Warp Drives 269

19.1: "Space bungees" and regenerative braking 271
 19.2: Boomeranging 272
 19.3: Exotic-matter drives 273
 19.4: The negative-field problem 274
 19.5: Ultrafast travel using simple gravity 275
 19.6: The "cresting" problem 276
 19.7: The Krasnikov tube 277
 19.8: Warfield Hawking radiation? 278
 19.9: The "acoustics" analogue 279
 19.10: Simple warfield generators 281
 19.11: Toroidal configurations 282
 19.12: Cancellation and non-cancellation 283
 19.13: The 2-spin torus 284
 19.14: Self-refraction and cross-refraction 286
 19.15: General field-refraction issues 287
 19.16: Momentum conversion 288
 19.17: "Reactionless" drives and deferred momentum 289
 19.18: Can we build a working warp drive? 289

PART VII: THE HUMAN FACTOR

20: Limitations of language and procedure 293

20.1: The order in which things are written 295
 20.2: Lightspeed, velocity, and language traps 295
 20.3: Fractured logic 297
 20.4: Logic traps and logical black holes 298
 20.5: More examples of circular thinking 300
 20.6: Is consistency all it's cracked up to be? 302
 20.7: "First answer" syndrome 303
 20.8: Life, Death, and the Square Root of Two 304
 20.9: The story of Pi 305
 20.10: Pi and global extinction 307
 20.11: Naming rituals, binary logic and Giant Pandas 308
 20.12: Intransitive logics 309
 20.13: Complex logical spaces 310
 20.14: Intransitive ordering and gravitation 312
 20.15: "Certainty" parameters 314
 20.16: Living with uncertainty 315
 20.17: Conclusions 316

21: The Perils of Experimentation 317

21.1: Evaluating science neutrally 319
 21.2: Perception filters 321
 21.3: System bias and "v1.0" syndrome 323
 21.4: Safety in numbers 325
 21.5: Accident reporting 326
 21.6: Quantum sociology? 327
 21.7: Pattern Recognition and group decisionmaking 328
 21.8: Market Forces 331
 21.9: Physics nightmares 333

22: Conclusions 335

22.1: SR-based or NM-based physics? 337
 22.2: The fork in the road 339
 22.3: Warning signs 339
 22.4: Mathematical "truth" vs. relevance 344
 22.5: Alternative alternatives 346
 22.6: Life after special relativity 346

PART VIII: Calculations, References and Index

Calcs. 1: Doppler shifts 348
 Calcs. 2: $E=mc^2$ from Newtonian mechanics 350
 Calcs. 3: Non-SR transverse Doppler / Aberration redshift 352
 Calcs. 4: The "Box of Frogs"/ classical Hawking radiation 354
 Calcs. 5: Comparison table 357
 Major Players 358
 Topic References 359
 General References 365
 Index 371
